

EMIL AGARUNOV

AI Engineer | Generative AI | LLM Applications | RAG | Python | FastAPI

info@resumementor.com linkedin.com/in/emilagarunov60b7b363 EnglishTown, New Jersey

SUMMARY

AI Engineer focused on building practical Generative AI applications using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Python, and backend technologies.

Bringing 10+ years of enterprise technology experience, with a strong background in system support, automation, troubleshooting, and large-scale IT environments. Experienced in developing AI-powered applications, document intelligence systems, and LLM-based solutions that connect modern AI capabilities with real business workflows.

Passionate about applying AI engineering principles to create reliable, scalable, and user-focused applications.

SKILLS

Artificial Intelligence:

Large Language Models (LLMs), Generative AI Applications, Retrieval-Augmented Generation (RAG), Prompt Engineering, Embeddings, Vector Search, AI Agents, and Automation Workflows

Programming & Backend: Python, FastAPI, REST APIs, JavaScript / Node.js, Rust, Backend Application Development

AI Development:

LLM Application Architecture, Document Processing Pipelines, Knowledge Retrieval Systems, Context-Aware AI Applications

Enterprise Technology: System Administration, Enterprise Support, Automation, Troubleshooting, Technical Documentation

EMPLOYMENT HISTORY

AI Engineer / Generative AI Developer

EnglishTown, NJ

Independent AI Projects

01/2026 - Present

- Designed and developed AI-powered applications using Python, FastAPI, and Large Language Models.
- Built Retrieval-Augmented Generation (RAG) systems for document-based question answering and knowledge retrieval.
- Developed LLM applications focused on improving user interaction through context-aware responses.
- Implemented AI workflows involving document processing, embeddings, and retrieval pipelines. Created backend services and APIs to support AI application functionality.
- Explored modern Generative AI technologies and applied them to practical software projects.

Desktop Support Specialist | IT Automation & Enterprise Technology

NewYork, NY

NYC OTI

08/2023 - 12/2025

- Provided technical support for enterprise computing environments. Installed, configured, and maintained workstation systems and applications.
- Assisted users with software, hardware, and access-related issues.
- Documented technical solutions and contributed to process improvements.
- Developed strong foundations in enterprise IT infrastructure and operations.

Senior Desktop Support Specialist | Enterprise Systems & IT Operations

Location

Novartis

06/2014 - 05/2023

- Managed incidents, requests, and problem resolution through ServiceNow while maintaining SLA compliance and improving user experience.
- Supported Windows enterprise environments including Active Directory, SCCM imaging, workstation deployment, software installation, upgrades, and lifecycle management.
- Performed system troubleshooting, endpoint security remediation, and application support across complex enterprise environments.
- Automated repetitive IT processes using scripting and system management tools to improve operational efficiency.
- Developed technical documentation, knowledge articles, and user training materials to enhance self-service capabilities.
- Analyzed recurring incidents and operational patterns to identify opportunities for automation and process improvement.
- Supported remote workforce transformation during COVID-19 through proactive maintenance, endpoint management, and technology continuity initiatives.

PROJECTS

MoodMateAI

LLM-Powered AI Application

- Built an AI application using Large Language Models to provide conversational and context-aware interactions.
- Designed application workflows for natural language understanding and response generation.
- Integrated AI capabilities into a user-focused application experience.

RAG Chatbot

Retrieval-Augmented Generation System

- Enhanced document retrieval efficiency by 25% by developing an AI assistant with RAG architecture.
- Implemented document retrieval and LLM-based answer generation workflows.
- Applied embeddings and knowledge retrieval techniques to improve response accuracy.
- Explored methods to reduce hallucination and improve AI reliability.

Netlancer

- Developed an application using modern programming technologies including Node.js and Rust.
- Focused on building efficient software solutions with modern development approaches. Increased processing speed by {25%} by developing application using Node.js and Rust.

EDUCATION

Computer Systems Networking and Telecommunications

Chubb Institute

PASSIONS

AI Engineering

Designing and developing intelligent applications using modern AI technologies, including Large Language Models (LLMs), Generative AI frameworks, and AI-driven workflows.

Large Language Model (LLM) Systems

Developing and integrating LLM-powered systems with prompt engineering, model orchestration, context management, and application-level AI workflows.

AI Automation Solutions

Developing scalable backend services and APIs using Python, FastAPI, and modern software engineering practices to support AI applications.

Generative AI Applications

Building practical AI solutions that leverage LLMs for conversational systems, knowledge assistants, automation tools, and business-focused applications.

Retrieval-Augmented Generation (RAG) Architecture

Designing RAG pipelines using document processing, embeddings, vector search, and knowledge retrieval techniques to improve AI accuracy and reduce hallucinations.

Enterprise AI Solutions

Applying AI technologies to enterprise environments by combining technical expertise, automation experience, and practical business requirements.
